## RESEARCH EXPERIENCE

*2023–Ongoing*      **ML based Model reduction, NTT Research, Inc.**  
Built a neural operator based learning architecture that can solve for the dynamics of 256 quantum harmonic oscillators simultaneously.

*2022–2023*          **Superoscillations and supergrowth [1–3]**

Developed an algorithm to generate functions with arbitrary superoscillation/supergrowth by choosing the values of only the first two coefficients in a series expansion.

Developed an algorithm to reconstruct objects that are an order of magnitude smaller than the illuminating wavelength.

Collaborated on the experimental realization of supergrowing optical fields.

*2021-2022*      **Fluxon refrigerator** [4]

Devised a refrigeration scheme utilizing the flow of magnetic field vortices along a magnetic field gradient in a type-II superconducting device.

*2020-2021*      **Stochastic path integral** [5]

Formulated a stochastic action principle-based description of a continuously monitored harmonic oscillator.
